Joint efforts are underway by NIH and leading journals to enhance reproducibility in scientific research through increased rigor and transparency in study design, conduct and data reporting.

An estimated $28.2 billion is spent in the US annually on preclinical research that could not be replicated\(^1\).

Categories of Errors contributing to Irreproducibility:

- Biological reagents and reference materials, 36.1%
- Laboratory protocols, 10.8%
- Study design, 27.6%
- Data analysis and reporting, 25.5%

Please join us to learn more about current expectations and opportunities to address these requirements for grant funding and publishing research.
